

SenScope™ Features

- Real-time communication capability with Resensys SenSpot™ and Resensys SeniMax™
- Real-time data visualization and management
- Real-time comparison and visualization of data of multiple sensors
- Monitoring large number of sites
- Structural diagnostics and alert generation with customizable alert levels
- Visualization and archiving of historical data of the structure
- Capability of adding user notes per sensor

Description

Resensys SenScope™ is for real-time monitoring and structural diagnostics based on measurements of Resensys SenSpot™ sensors. SenScope™ is capable to reduce large volume of data of Resensys SenSpot™ sensors into specific structural diagnostics information. The information generated by SenScope™ facilitates decision-making and accelerates the course of action for maintenance/repair.
